

GATH COMFORT STRIP INSTALLATION INSTRUCTIONS

Gath Convertibles offer a unique fitting system to provide the ultimate fit with maximum comfort and stability. For surfing and similar wave sports, Gath recommends you carefully choose a helmet size and comfort strip combination that provides a snug fit. The helmet must not be loose. When fitting, allow a little time for the soft foam comfort strip to compress, then determine the fit is firm with no uncomfortable pressure points.

1. Peel back approximately 100mm (4") of the pressure sensitive adhesive backing tape. Place the end of the comfort strip in the channel at the rear and center of the helmet.

2. Continue pushing the comfort strip into the channel, slowly peeling back the adhesive strip and moving around the circumference of the helmet, pressing the comfort strip firmly in place.

3. For a secure finish, it is best to leave approximately 5mm (3/16") of comfort strip, then cut off excess length using a sharp pair of scissors and squeeze into place.
